WORLD TRADE IN
SELECTED
AGRICULTURAL COMMODITIES
1951-65

TRI-AGENCY READING ROOM

MAY 12 1972

500 12th St., SW, Room 508 Washington, D. C. 20250

VOLUME II. - Food and Feed Grains:
WHEAT, RICE, MAIZE, BARLEY, AND OTHER CEREALS

Studies in the Series on World

Trade in Selected Agricultural

Commodities, 1951-65

Beverage Crops: Coffee, Cocoa, and Tea

Food and Feed Grains: Wheat, Rice, Maize (Corn), Barley, and Other Cereals

Textile Fibers: Cotton, Jute, and Other Vegetable Fibers

Sugar, Fruits, and Vegetables

Oilseeds, Oil Nuts, and Animal and Vegetable Oils

PREFACE

This is one in a group of statistical studies on world agricultural trade, prepared as a part of the research project, "Analysis of Demand Prospects for Agricultural Products of the Less Developed Countries," being conducted by the Economic Research Service under a participating agency service agreement for the Agency for International Development.

These volumes present 1951-65 data on trade flows of selected agricultural commodities for 19 importing or exporting regions, showing regions of origin of imports and destination of exports. These data, not available in this form from other sources, are presented in tabular matrix form so that the volume of trade--exports and imports--among the 19 regions can readily be discerned. These statistical series include commodities which account for 80 percent of the agricultural exports and 33 percent of all exports of less developed countries and are believed to be the most comprehensive series available. These series should fill a part of the information gap in international trade and make possible a more comprehensive analysis of changes in the patterns of trade in agricultural products. Although there is some repetition of world trade information in the series, it is necessary because not all readers will want the entire group or series.

This volume on food and feed grains--wheat, rice, maize (corn), barley and other cereals--is based on data from many different sources. It has been necessary to make estimates of trade flows based upon value data for some countries because of incomplete reporting. World exports of each commodity in any one year equal world imports.

This volume also includes tables for 1964 showing total world trade and total agricultural trade for 19 importing regions and regions of origin of their imports. Conversely, they show trade flows for 19 exporting regions and destination of their exports. These data on agricultural trade are in a form not available from other sources. They provide a basis for observing the importance of food and feed grains in total trade and in agricultural trade by countries and regions.

The research project on the demand prospects for agricultural exports of less developed countries is being conducted by ERS in three phases: (1) historical analysis of trade flows, (2) analysis of demand prospects, and (3) analysis of policy implications of estimated world demand prospects, under the joint supervision of an ERS Technical Advisory Committee by Arthur B. Mackie and Anthony S. Rojko. Special acknowledgement is given to the Communist Areas Analysis Group, Europe and Soviet Union Branch, Foreign Regional Analysis Division, for compiling the data for the Soviet Bloc countries. Martin E. Abel, Deputy Assistant Secretary, International Affairs, was Chairman of the Technical Advisory Committee at the start of the project.

June 1968

SUMMARY

The volume of world grain trade increased steadily over the 1951-65 period--increasing at the annual rate of 6.2 percent. Exports of feed grains were the leader--growing at 7.7 percent, while food grains increased at 5.4 percent per year. The most rapid rate of growth in volume of exports was maize (corn)--increasing at an annual rate of 13.9 percent.

World trade in grain crops--wheat, rice, maize, barley, and other cereals--was valued at \$6.78 billion or about 18 percent of world agricultural trade in 1964. The largest of these export crops was wheat, representing about \$3.4 billion or 9 percent of world agricultural trade in 1964. The value of maize exports, the second largest, was \$1.256 billion, while rice exports were valued at \$0.923 billion. The value of all other cereal exports was \$1.182 billion.

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods needed for economic development. In 1965, four countries depended upon grain exports for more than 20 percent of their export earnings. Two countries depended upon rice exports for more than 50 percent of total export earnings. There were 12 countries in which coffee, cocoa, or tea exports accounted for more than 50 percent of export earnings. Eight countries relied upon sugar, seven countries upon oilseeds and vegetable oils, three countries upon cotton, and two countries upon fruits and vegetables for more than 50 percent of their export earnings.

The United States and Canada are the largest exporters of food grains-accounting for 58 percent of world exports of food grains in 1964-65. The
largest exporters of feed grains were the United States, Latin America, and the
EEC--accounting for 74 percent of world feed grain exports in 1964-65. Rice
exports in 1964 were of major importance to South East Asia--accounting for
55 percent of world rice exports and 36 percent of total regional export earnings

The major grain importers are Japan, the European Economic Community (EEC), the European Free Trade Association (EFTA), Eastern Europe, Latin America, North Africa, and South Asia. The U.S.S.R. and Communist Asia have become major importing regions since 1960. These nine major importing regions accounted for 86 percent of world grain imports in 1964. Western Europe (EEC and EFTA) in 1964 alone accounted for 31 percent of world grain imports, 19 percent of world wheat imports, 60 percent of world maize imports, 49 percent of world barley imports, 7 percent of world rice imports and 64 percent of imports of all other cereals. The Communist Bloc countries accounted for 25 percent of world grain imports, 37 percent of world wheat imports, 6 percent of world maize imports and 9 percent of world rice imports in 1964.

WORLD TRADE IN SELECTED AGRICULTURAL COMMODITIES, 1951-65

Volume II.--Food and Feed Grains: Wheat, Rice, Maize, Barley, and Other Cereals

Arthur B. Mackie

and

A. Nicholas Filippello John E. Hutchison James F. Keefer 1/

INTRODUCTION

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods. For example, according to the 1966 FAO Trade Yearbook there were 66 less developed countries and territories in 1965 with agricultural exports accounting for more than 50 percent of total export earnings. Because of this heavy dependence upon agricultural exports, fluctuations of export prices for agricultural commodities cause large variations in export earnings and on total economic growth. These variations are especially large in the case of countries depending upon export earnings from only one or two commodities.

In 1965, four countries depended upon grain exports for more than 20 percent of their export earnings (table 1). In two of these countries—Burma and Cambodia—rice exports accounted for more than 50 percent of total export earnings. In 11 countries, coffee, cocoa, or tea accounted for more than 50 percent of export earnings. Eight countries depended upon sugar, seven countries upon oilseeds and vegetable oils, three countries upon cotton, and two countries upon fruits and vegetables for more than 50 percent of their export earnings.

The less developed countries need better information on demand prospects for agricultural exports as a basis for planning and carrying out economic development programs. Future growth in the export demand for agricultural commodities of the less developed countries will influence the amount of land and other resources that can economically be used for expanding the production of export commodities.

^{1/} Mackie is with the Economic Development Branch, and Filippello is with International Monetary and Trade Research Branch, Foreign Development and Trade Division. Hutchison is with Western Hemisphere Branch, and Keefer is with Far East Branch, Foreign Regional Analysis Division.

2

This report presents detailed trade data that can be used for evaluating trade prospects for food and feed grains. It contains historical data on the volume of exports and imports of these commodities for 19 regions for 1951-65. Trends in the growth of trade in these commodities by major countries and regions are compared with trends in population and per capita income growth for 1951-65. Data on value of exports and imports of these commodities by regions are not now available in matrix form. However, world average export unit values for grain crops are shown in table 2 for prewar and 1948-66. Value trade matrices can be obtained by multiplying these unit prices by the quantities in the following tables. However, such values obtained will not necessarily equal the import or export values as reported by the United Nations since the unit prices will differ somewhat by countries.

WORLD PATTERNS OF AGRICULTURAL TRADE

The volume of world agricultural exports increased about 3.5 percent per year from the averages of 1948-52 to 1964-65. In real terms, the value of agricultural exports grew at an annual rate of 2 percent during this period (7). 2/

Trade in agricultural products in 1964 was about one-fourth the value of total world trade (tables 3 and 4). In 1964, the value of world agricultural trade amounted to \$38.6 billion. As a group, the less developed countries accounted for 37 percent of world agricultural exports and 16 percent of world agricultural imports (table 5). The value of agricultural exports of the less developed countries in 1964 was \$14,468 million, whereas their agricultural imports were only \$6,186 million. The developed countries were the major markets for the agricultural exports of less developed countries—accounting for 78 percent. The United States alone took 21 percent of the agricultural exports of less developed countries to each other accounted for 14 percent.

As with agricultual exports, the developed countries accounted for the major share (61 percent) of the agricultural imports of the less developed countries. The less developed countries turned to other less developed countries for 32 percent of their agricultural import needs, or slightly less than the 36 percent from the United States (table 5). The remaining 7 percent of agricultural imports of the less developed countries come from the Communist Bloc.

IMPORTANCE OF GRAINS IN WORLD TRADE

The total value of world grain exports (as reported by the 1966 FAO Trade Yearbook) was \$6.78 billion, or about 18 percent of the value of world agricultural trade in 1964. Wheat grains were by far the largest of the grain export crops--representing about \$3.4 billion, or about 9 percent of world agricultural trade in 1964. The value of maize (corn)--the second largest grain export crop-was \$1.256 billion. The value of rice--the third largest grain export crop-was \$0.923 billion, while the value of all the remaining grain exports was \$1.182 billion. These data are averages of world imports and exports.

^{2/} Underscored numbers in parentheses refer to items in Selected References, p. 170.

^{1/} Calculated from data in tables 3 and 4.

Regionally, grain exports are of major importance to the United States, Canada, EEC, Australia - New Zealand - South Africa, Latin America, and South East Asia. These six regions accounted for 90 percent of world grain exports in 1964. In that year, the United States alone accounted for 41 percent of world grain exports; Canada for 17 percent; EEC, Australia-New Zealand-South Africa, and Latin America each for 9 percent; and South East Asia for 5 percent.

In terms of the three major grain export commodities--wheat, rice, and maize--the United States accounted for 41 percent of world wheat exports, 18 percent of world rice exports and 53 percent of world maize exports. The value of these grain exports accounted for about 9 percent of total U.S. export earnings in 1964.

In Canada, only wheat exports are of major importance--accounting for 12 percent of Canada's export earnings in 1964. Rice exports were of major importance to South East Asia--accounting for 36 percent of total regional export earnings and representing 55 percent of world rice exports.

^{2/} Shares of less developed countries are shown in parentheses.

In the other major grain exporting regions--EEC, Australia-New Zealand-South Africa, and Latin America--grain exports, while important, represented less than 10 percent of total regional export earnings. The importance of grain exports in total export earnings in such countries as Australia and Argentina, of course, would be a much higher percentage. Grain exports, mostly wheat, represented 17 percent of Australia's and 36 percent of total 1964 export earnings in Argentina.

The major grain importing regions are Japan, EEC, EFTA, Eastern Europe, Latin America, North Africa, and South Asia; the U.S.S.R., and Communist Asia have become major importing regions since 1960. These nine major regions accounted for 86 percent of world grain imports in 1964. Western Europe (EEC and EFTA) in 1964 alone accounted for 31 percent of world grain imports, 19 percent of world wheat, 60 percent of world maize imports, 49 percent of world barley imports, 7 percent of world rice imports, and 64 percent of the imports of all other cereals. Of the other major importing regions, the Communist Bloc countries in 1964 accounted for the largest remaining share of world grain imports—37 percent of world wheat imports, (36 percent in 1965), 6 percent of the world maize imports, and 9 percent of world rice imports. These regions—U.S.S.R., Eastern Europe and Communist Asia—accounted for 25 percent of world imports of all grains. Japan accounted for 9 percent of world grain imports in 1964.

The major less developed grain importing regions--South Asia, North Africa and Latin America--accounted for 21 percent of world grain imports in 1964. South Asia alone accounted for 10 percent while North Africa and Latin America accounted for 4 and 8 percent, respectively, of world grain imports. The grain imports for all Asia, including Mainland China, represented 24 percent of world grain imports in 1964.

HISTORICAL TRENDS OF TRADE IN WORLD GRAIN EXPORTS

The volume of world grain trade increased rather steadily during 1951-65 from 47 million metric tons in 1951 to 102.1 tons in 1965 (table 6). 3/ However, there were mixed tendencies in the rate of increase in volume of exports among the various grains since 1960. For example, food grain exports increased 42 percent, while feed grain exports increased 60 percent above the 1959-61 base period. There were also mixed tendencies in the volume of exports within the two broad groups of grain--food and feed. The volume of wheat exports, for example increased 56 percent above 1959-61, while rice exports actually declined in 1961-63. Rice exports rebounded in 1965 to a level of 10 percent above 1959-61. Exports of barley and other cereals experienced an uneven upward trend during this period, while exports of maize rose sharply--increasing 96 percent since 1959-61.

^{3/} All tons in this report are metric.

^{1/} Wheat equivalent does not actually represent the sum of columns (6) and (7); rather it represents the sum of column (6) and the grain equivalent of wheat flour in column (7).

There were marked differences also in the growth rates in the volume of trade for the six categories of grain during 1951-65. Exports of maize had the most rapid growth; they increased 13.9 percent per year, while the volume of trade in barley was the most sluggish, growing at an annual rate of only 2.2 percent (table 7). The growth rates in the volume of trade in all other cereals (2.9 percent), and wheat (6.5 percent) were greater than those for rice and barley, but fell short of the rapid growth rate in maize exports (13.9 percent). These historical trends in the volume of exports for the various grains are shown in table 6 and figures 1, 2, and 3, while the growth rates for these grains are shown in table 7 along with the growth rates in population and per capita GNP of major grain exporters and importers.

The United States and Canada are the largest exporters of food grains, accounting for 58 percent of world exports of food grains in 1964 and 65. However, other exporting regions had faster rates of growth in food grain exports than these two major exporters. For example, Australia-New Zealand-South Africa expanded food grain exports 8.5 percent per year during 1951-65 (table 7), while the annual growth rates for the United States and Canada were only 6.6 and 3.7 percent, respectively. The EEC and U.S.S.R. also had faster rates of growth in food grain exports than the United States and Canada-increasing at an annual rate of 12.0 and 17.4 percent, respectively. South East Asia and Latin America had the slowest rate of growth in food grain exports of all major exporting regions--increasing at an annual rate of only 1.4 and 4.0 percent, respectively.

The United States, Latin America, and the EEC are the largest exporters of feed grains--accounting for 74 percent of world feed grain exports in 1964-65. Of these three major exporters, the EEC had the fastest rate of growth in the volume of exports during 1951-65--increasing at an annual rate of 26.6 percent, compared with a slower rate of 11.1 and 9.5 percent for the United States and Latin America. South East Asia had the second highest rate of growth in the volume of feed grain exports--increasing at an annual rate of 26.3 percent per year. However, this region, primarily Thailand, started from a very low export base in 1951.

The rapid rate of growth in EEC food grain exports is due in part to a large demand for food grain imports of other Western European countries, primarily EFTA countries. In addition, the countries of Eastern Europe and North Africa provided rapidly growing markets for EEC food grain exports. On the other hand, South Asia, Latin America, and Japan were the largest importers for food grains from the United States. The Communist Bloc countries generally provided the major outlets of food grain exports for Canada and Australia.

The major importers of feed grains are the EEC, EFTA, and Japan--accounting for 74 percent of the world imports. Of these three major import markets for feed grains, Japan was the fastest growing market--increasing at an annual rate of 13.2 percent, compared with 9.4 and 4.7 percent for the EEC and EFTA. Eastern Europe represents a faster growing market (11.4 percent) than either EEC or EFTA, but it is also a much smaller market.

Figure '

A more detailed analysis of the changes in the patterns of exports and imports of grain crops is outside the scope of this statistical volume. However, the foregoing observations should be helpful to those using the statistical trade summaries at the end of this report.

EXPLANATION OF STATISTICAL TABLES

A portion of the Standard International Trade Classification scheme for agricultural products included in this study is given in table 8. Trade data in tables 9-158 were compiled on the basis of this scheme. Those wishing a more detailed definition of this classification should refer to the United Nations manual (8).

The world is subdivided into 19 major trading regions in the tables on trade in grain crops. They are:

Developed Regions and Countries

- 1. United States.
- 2. Canada.
- 3. Japan.
- 4. EEC--European Economic Community--includes Belgium, Luxembourg, France, Fed. Rep. Germany, Italy, and Netherlands.
- 5. EFTA--European Free Trade Association--includes Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and United Kingdom.
- 6. OWE--Other Western Europe--includes Cyprus, Finland, Greece, Iceland, Ireland, Malta, and Spain.
- 7. Australia, New Zealand, and South Africa.

Eastern Trade Regions and Countries

- 8. Eastern Europe includes Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and Yugoslavia.
- 9. U.S.S.R.
- 10. Communist Asia includes Mainland China, Mongolia, North Korea, and North Vietnam.

Table 8.--Commodities and years for which quantity import data were obtained

ess Developed Regions and Countries

- 1. Latin America includes all countries in Central and South America and the Caribbean.
- North Africa includes Algeria, U.A.R. (Egypt), Libya, Morocco, Sudan, and Tunisia.
- 3. West Africa includes Angola, Cameroon, Central African Rep., Chad, Congo Rep. (Braz.), Rep. Congo (Kinshasa), Dahomey, Gabon, Gambia, Ghana, Guinea, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Portuguese Guinea, Senegal, Spanish Sahara, South West Africa, Upper Volta, and Togo.
- Lesotho, Mauritius, Malawi, Malagasy Rep., Mozambique, So. Rhodesia, Reunion, Rwanda, Somali Rep., Fr. Somaliland, Swaziland, Tanzania, Uganda, and Zambia.
- 5. West Asia includes Aden, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Saudi Arabia, Syria, Turkey, Lebanon, Qatar, and Yemen.
- 6. South Asia includes Afghanistan, Bhutan, Ceylon, India, Nepal, and Pakistan.
- 7. South East Asia includes Burma, Cambodia, Laos, South Vietnam, and Thailand.

- 18. Other East Asia includes Hong Kong, South Korea, Macao, Philippines, Portuguese Asia, Ryukyu Islands, and Taiwan.
- 19. Far East and Oceania includes Australian New Guinea, Brunei, New Caledonia, Fiji, Guam, Indonesia, Malaysia, West Irian, Papua, French Polynesia, Sabah, W. Samoa, Sarawak, and Singapore.

The quantity data for trade in grains were compiled from the commodity trade statistics of the United Nations, and supplemented with data from individual country trade statistics, FAO, OECD, EEC, and international commodity association trade publications. Both exports and imports for all countries were compiled in tabular matrix forms and further aggregated into the more concise tabular matrix of 19 major importing and exporting areas (tables 9-158).

The reader can best understand the use of the following trade matrices if one or two things are kept in mind. First, the column headings are importing regions, while the exporting regions for each column are shown on the rows in the far left-hand stub.

For example, in the tabular matrix for total grain for 1951 (table 9), the origin of imports for the EEC can be found by reading down the column labeled EEC. The first figure (5,566) represents imports of grain of 5,566,000 tons from the United States. The second figure (1,700) represents grain imports of 1,700,000 tons from Canada. As one proceeds down the column to the figure (1,360), it can be seen that the EEC imported 1,360,000 tons of grains from Latin America. The last figure (11,783) at the bottom of the column represents the total grain imports of the EEC in 1951.

The exports of any region can be found by reading across the column on a particular row, say Latin America. Latin America exported 18,000 tons to the United States, 11,000 tons to Canada, 5,000 tons to Japan, 1,360,000 tons to the EEC and so forth across the table until we arrive at the total grain exports from Latin America of 3,819,000 tons.

The absence of data for any one importing region from a particular exporting region, say Japan from South Asia, may not mean that Japan did not have any grain imports from this region. Rather, it means that if Japan had any grain imports, they were less than 500 metric tons. Similar interpretations can be made for other cells in the following tables where there is no data. For most purposes, the absence of data means trade flows of less than 500 metric tons.

The two trade matrices that summarize world total and agricultural trade for 1964 in tables 4 and 5 are presented as guidelines so that appraisals can be made of the magnitude of export earnings by regions in a recent year and as a basis of comparison for those wishing to evaluate export earnings from grains. This latter comparison can be made by multiplying selected unit prices (shown in table 2) by the quantity data in each cell of the appropriate quantity trade tables. However, these resulting values can be considered as only estimates of the value of exports or imports. Actual value trade matrices could have been compiled from the United Nations trade data, but time limitations prevented this undertaking.

The following trade data were compiled primarily on the basis of import statistics since the developed countries have had the most highly developed set of historical statistics and a longer history of reporting these statistics to the United Nations. When import data were lacking, they were supplemented by export statistics. In all cases where there were conflicting data, efforts were made to reconcile these, subject to the magnitudes of exports and imports of any one region as listed by the trade statistics of individual countries shown in the FAO trade yearbook.
